"11 years. 6 domains. 100+ product releases. One mission: deliver value, fast."

Profile Summary

10+ years of cross-domain product leadership across enterprise SaaS, Fintech, and AI-driven platforms. Certified SAFe® 6 POPM and CSPO with a strong track record of building scalable products, leading agile transformations, and driving measurable outcomes through customer-centric roadmaps.

Career Narrative

Over the past decade, I've embraced opportunities across diverse companies to gain **multi-industry expertise, deeper ownership of product outcomes, and exposure to global markets**. Whether working with German prop-tech startups or leading AI-powered automation at global enterprises, I've consistently delivered **impact-driven, scalable product solutions** that solve real user problems and have resulted in measurable positive outcomes. In the next 5 years, I want to put everything I have learnt to its best use, lead products in a customer facing role where I can fit the most advanced technological advancements into real world products.

Core Strengths

Strength Area	Superpowers
Product Leadership	Vision, Roadmap, Value Delivery, Outcomes
Agile Delivery	SAFe, Scrum, Backlogs, Sprints, Collaboration
Platform & Scale	API-First, Microservices, Automation, Scalability
Domain Expertise	Payments, AI/ML, FinTech, E-commerce, Tax & Accounting
Data-Driven Decisions	A/B Testing, Metrics, KPIs, Insights
AI Capability	GenAI, ML, RAG, Model Evaluation, Responsible AI, ROI
Tools	Jira, Miro, Postman, AWS, Azure, SQL, Copilot, Supabase, n8n

Career Highlights Across Organizations

Key Area	Impact Delivered
AI	4 AI-powered invoice processing features (Wolters Kluwer), **improving invoice recognition and supplier identification by 5%.**
Platform Transformation	Led monolith-to-microservices transition in Wolters Kluwer & Capita, improving deployment agility and platform scalability.
Product Growth	**Drove a 15% increase** in occupancy rates for landlords (Homelike) via A/B tested features and data driven releases.
Scale Readiness	Integrated Homelike with external OTAs, expanding **supply inventory by 25% YoY**
Automation	Built an innovative historical invoice data driven automation mechanism to **reduce lost opportunities by 80%.**

Professional Experience

Senior Agile Product Owner, Wolters Kluwer – Pune, India *(Sep 2023 – Present)*

- Drive the vision for AI-powered invoice automation by collaborating with data scientists, UX designers, product managers, and SMEs/Accountants. Utilize machine learning models (OCR and NLP) for invoice data extraction, enhancing processing efficiency (~5% time reduction) and accuracy.
- Lead the development and delivery of microservices to increase the scalability of platform and reduce the deployment time. Define user stories and acceptance criteria in Jira, work with engineers to containerize services, and use Postman to validate APIs. This modernization boosts scalability and enables faster deployments.
- Conceptualized the integration with PEPPOL network by studying the API Specifications of access points and created EPICs, Features and User stories with prioritized backlog. This enables the organization to comply with regulatory requirements for e-Invoicing in EU.
- Conceptualized and built an innovative historical invoice data analysis driven automation mechanism that today shows 80% reduction in lost automation opportunities with almost 90% accuracy,
- Spearhead Agile ceremonies (PI Planning, sprint planning, backlog grooming, and demos) under SAFe. Maintain the product backlog in Jira, prioritize features based on WSJF, and conduct regular stakeholder demos to iteratively refine requirements.

Product Owner, Homelike Internet GmbH – Cologne, Germany *(Aug 2021 – Aug 2023)*

- Designed and launched robust API integrations with third-party OTAs (e.g. Rentals United, HotelNetSolutions, Apaleo etc.) to expand property inventory. Partnered with external integration teams and internal developers to map data flows, using Postman for testing. These efforts increased platform supply by ~25% year-over-year.
- Led data-driven A/B testing on property listing features, collaborating with UX designers and data analysts. Defined test hypotheses, tracked experiment metrics, and iterated on winning variants. The optimized property listing and promotions resulted in a ~15% lift in occupancy rate.
- Established and tracked OKRs for inventory growth and user engagement with clear value stream. Collaborated across product, design, engineering, and marketing teams using Miro workshops and Jira sprint boards, ensuring aligned focus on scale initiatives. Regular cross-team syncs and stakeholder interviews kept the roadmap on track.
- Used experience to increase team productivity in regular sprint planning, review and retrospective sessions. Deep dived into team's feedback to define clear action items.

Senior Business Analyst (Product Owner Proxy), ThoughtWorks – Pune, India *(Feb 2020 – Aug 2021)*

- Defined and prioritized features for Daimler's MBOS automotive platform. Engaged with global stakeholders to gather requirements for connected vehicle services and wrote detailed user stories and acceptance criteria. Created story maps using Lucidchart and coordinated with distributed Scrum teams to drive enhancements in telematics and e-mobility.
- Managed Agile planning across distributed squads (India and Germany). Facilitated PI planning, daily stand-ups, sprint planning, sprint reviews, retrospectives and system demos. Refined product backlogs for sprint readiness and used Jira to track progress. Ensured cross-team alignment on release goals and mitigated dependencies.

- Identified dependencies and risks to increase transparency and ensured continuous follow-up with concerned stakeholders and teams through sessions like ROAM the risks, Scrum of scrum etc.
- Aligned cross-geo stakeholders by hosting joint demos and decision forums. Presented progress and architectural diagrams, resolved conflicts, and built consensus on priorities. This coordination streamlined development and integrated feedback from Daimler's international teams.

Business Analyst (Product Owner Proxy), Capita – Pune, India *(Feb 2019 – Jan 2020)*

- Led the modernization of a legacy mortgage origination platform (CMSS) by transforming it into microservices based architecture. Worked with architects to define service boundaries and managed the backlog for each module. Coordinated the development of independent Spring Boot services to replace monolithic components, greatly improving scalability.
- Analyzed runtime performance data (using SQL) to guide migration priorities. Identified high-impact processes and aligned modernization sprints accordingly, which reduced operating costs by ~20% and improved system resilience. Created dashboards to track performance improvements post-migration.
- Collaborated with business stakeholders (operations, compliance, IT) to validate requirements and workflows for the new system. Conducted interviews and feedback sessions, ensuring rebuilt modules met user needs. Clear documentation and workshops minimized rework during the transition.
- Ensured highest level of productivity with Sprint planning, Backlog refinements, Sprint reviews & Sprint retrospectives. Deep dived into team's feedback during retrospectives to ensure each iteration contributes to increased productivity, velocity and less conflicts.

Business Analyst (Contractor), SEED Infotech Ltd. / CRIF Solutions India – Pune, India *(Jul 2018 – Dec 2018)*

- Gathered and translated requirements for credit bureau automation platform for auto data correction business workflow. Interviewed banks to understand their credit data correction workflows, then produced functional specifications and user stories for developers.
- Collaborated with domain experts and engineers to refine product requirements.
- Conducted regular sprint review sessions with customer banks to setup a continuous feedback loop.
- Crafted product vision and setup product roadmap with regular discussions with SMEs and Customers.
- Prioritized backlog with regular refinements and ensured n+1 sprint backlog readiness.

Business Analyst, Exxat Systems – Pune, India *(Aug 2016 – Jul 2018)*

- Managed the curriculum management product requirements for U.S. higher-education clients. Engaged with administrators and instructors to gather needs, translating their feedback into prioritized feature backlogs. Utilized user-feedback loops (surveys, interviews) to continuously refine the platform.
- Drove product enhancements by defining clear user stories and wireframes (using Figma) in collaboration with design and engineering teams.
- Introduced iterative demos and feedback sessions with clients to ensure each release met their requirements, improving user satisfaction and retention.

- Documented workflows and user journeys to guide development and maintained acceptance criteria in Azure DevOps. These practices reduced misunderstandings and rework, accelerating delivery of key features.
- Conceptualized, Designed and Developed a Contracts Management System to enable smooth contracts management. Drafted MVP scope, created epics, features and user stories with clear acceptance criteria and definition of done. Ensured agile delivery with regular Sprint Planning and Sprint Review sessions with end customers and setup a feedback loop to win more than 10 pilot customers.

Business Analyst, BlitzCode Systems – Pune, India *(Aug 2014 – Aug 2016)*

- Delivered detailed product requirements for custom mobile and web applications in terms of BRD, FRD and SRS.
- Conducted client interviews to capture needs, then created wireframes and flowcharts to clarify the user experience.
- Collaborated with developers in Agile sprints to refine backlog, align on current implementation through daily standups, sprint planning, sprint reviews and retrospective.
- Improved requirement clarity by defining precise acceptance criteria and use cases. Facilitated regular walkthroughs between clients and the development team to validate understanding early, significantly reducing rework and accelerating project timelines.
- Assisted in end-to-end workflow documentation for new applications, ensuring all stakeholders shared a common view of processes. This documentation enhanced team efficiency and supported smooth hand-offs between design, development, and QA.

Education & Certifications

Bachelor of Engineering (Information Technology)
University of Pune — *2009–2014*

Certifications:

- Certified Scrum Product Owner (CSPO)
- SAFe® 6 Product Owner/Product Manager
- Client Needs and Software Requirements – Coursera
- Professional Certification in Advanced AI from Product Space AI PM program
    - TOP PERFORMER of Cohort 6 @ Product Space
    - Winner of 6th Demo Day - Checkout the Demo
